

Curoloa WhatsApp

Your Personal Healthcare Assistant

Managing Healthcare

Streamlining healthcare communication and improving patient experience with our instant healthcare support chatbot.

Connect with Patients like Never Before

The WhatsApp-based chatbot is enabled to receive and answer messages from patients regarding any information and respond with the required details. This multilingual support bot, when integrated with an HMS, it provides real-time patient

The chatbot is also designed with appropriate security and privacy measures in place so as to protect medical and patient information. The chatbot also helps in analytics and reporting by collecting data on patient interactions and generating reports on usage, so as to

Patients can use the chatbot to schedule and reschedule appointments, and receive reminders about upcoming appointments.

Appointment Scheduling

Reminders / Trackers

Automated medication reminders can be sent to patients via notifications, email and/or SMS, reducing the risk of missed medication.

Constant engagement with patients helps with their healthcare decision-making and increases awareness for treatment. Weekly surveys help

Patient Education

Info Collection

The chatbot can help update vitals, answer FAQs about hospital, book tests and packages, provide test results, and collect patient feedback in order to improve patient satisfaction.

WhatsApp Bot

Patient Engagement is just a Click Away

Patient-centricity is the backbone of Mocero Health's products. The WhatsApp-based chatbot feature developed by us can be accessed by patients at any time for support and assistance. This is particularly beneficial for patients who require medical advice or support outside of regular hospital

The chatbot is designed to provide personalized responses based on patient information requests. It also collects data on patient interactions, constantly identifying areas of improvement and optimizing the chatbot's design to better meet patient needs, thus helping to

Better Communication

Integrating the chatbot with the hospital HMS ensures that information is easily available to the patient through communication, making adherence to treatment plans much easier.

Faster Response

Instant responses to patient queries by chatbot improves communication efficiency and reduces patient waiting times, benefiting patients who require urgent medical advice or support.

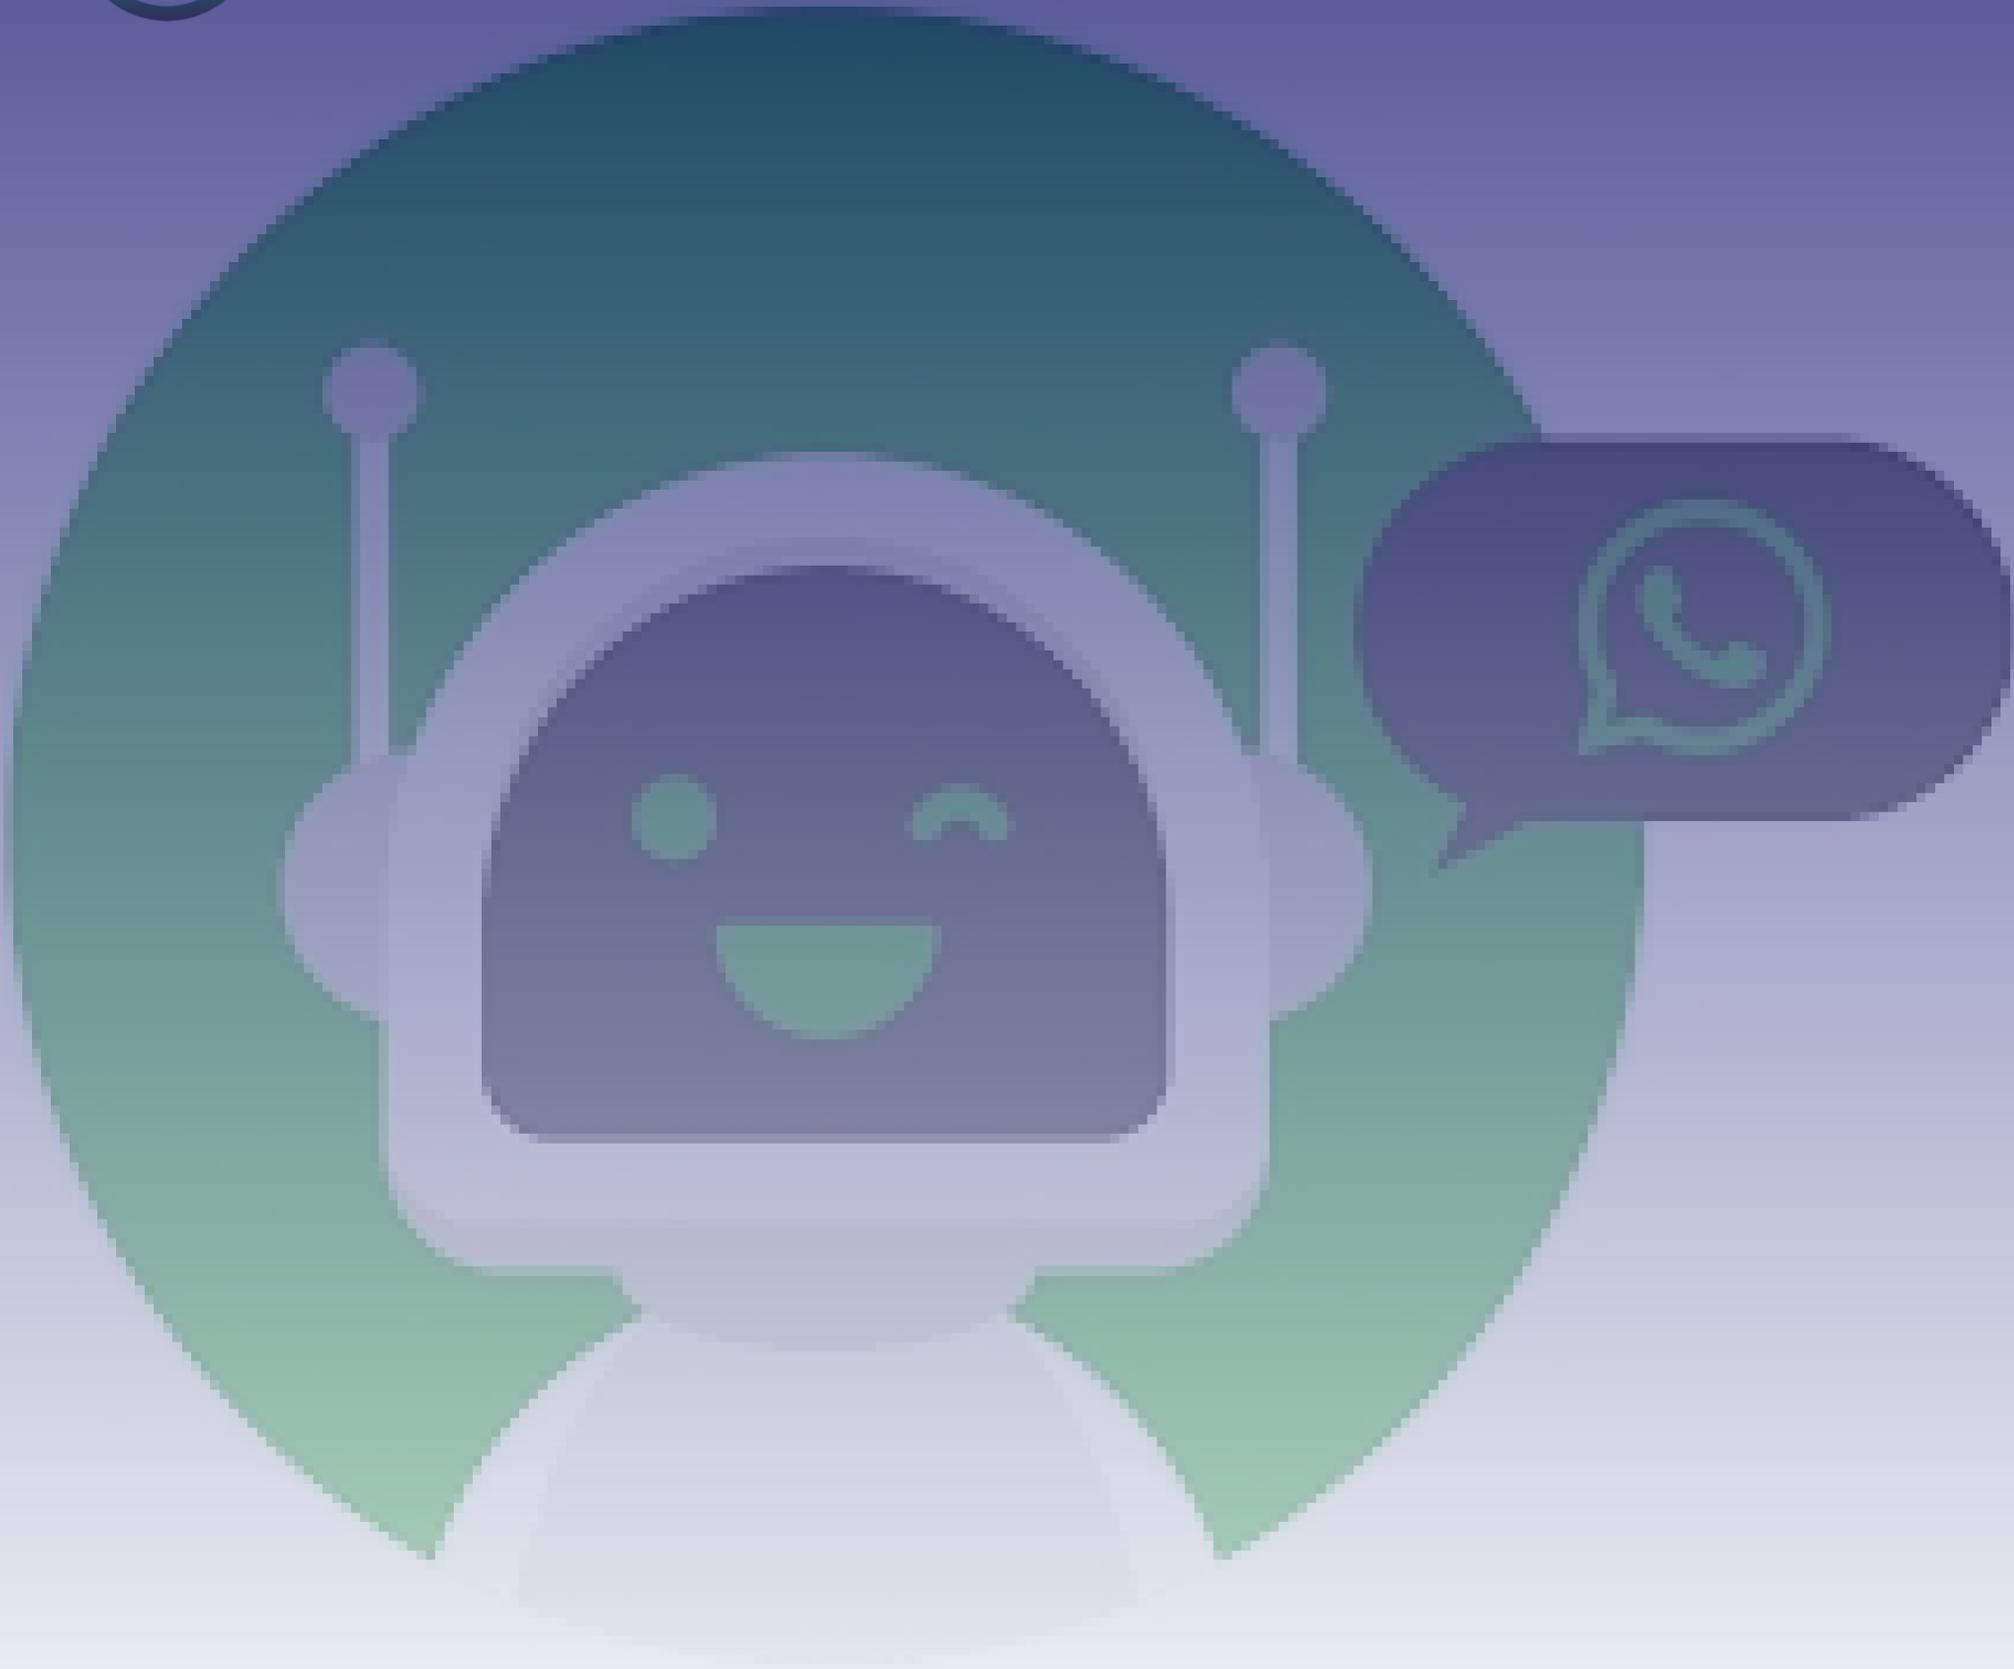

Reduced Workload and Cost

Chatbot can handle routine queries and tasks, freeing up staff time for more complex tasks, reducing staff burnout and improving job satisfaction, while also reducing healthcare costs.
